BerkelBike and Tacx

You feel like cycling, but the weather is putting you off? No problem! In an instant you can transfer the BerkelBike Connect and the Pro into a top home trainer. Both can work with the - specially for BerkelBike adapted - Tacx rollers. Both recreational and professional cyclists train with this system. Place the front wheel in the Speedbraker or Flow VR and off you go!

Speedbraker

Tacx Speedbraker is strong in its simplicity. This trainer contains no cables or wires. Simply place the front wheel in the trainer and start cycling! The resistance provided is comparable to that of cycling on a flat tarmac road with a gentle following wind. Even if you have little strength, with this trainer you will reach your goal!

Flow VR

With the Flow VR you encounter the sensation and challenges of riding outdoors. You can cycle in a virtual world and, for example, compete in the Tour de France. You can also save your performances and use them as your competitors the next time you ride. This is the most enjoyable way of doing your stationary training!
